## AgriVoltaics2020: New Conference Date!

Dear Sir/Madam

At the AgriVoltaics2020 conference we will have an outstanding conference program, thanks to all the great contributions we have received, but travel is still quite restricted. However, as the situation is currently improving in many countries, we have decided to postpone the conference to **October 14-16, 2020**, hoping that we can then welcome everyone in Perpignan! The conference will of course be organized in compliance with all local hygiene regulations to make you feel safe and sound.

For those who cannot join the on-site conference in Perpignan, we offer a Virtual Conference Platform, providing full access to presentations, posters, and papers. In addition, you will find possibilities to get in touch with other conference participants.

### Online Registration

[Register now](#) and attend the AgriVoltaics conference either on-site or via the virtual access to all presentations! To benefit from the Early Bird Rates, please register before August 12, 2020.

All given presentations, no matter whether oral or poster, will be available as a video which can be streamed on the Virtual Conference Platform shortly after the sessions and until February 2021!

### Program Now Online

From all the high-quality entries we have received, we have put together a varied and [exciting program](#). Scientists from 21 countries will give in-depth insights into the latest research and best practice in the agrivoltaics sector, and there will be time for scientific exchange and networking! A technical tour for participants, which will visit the [Nidolères Estate](#), will complement the program.

Register for the conference and spread the word about AgriVoltaics2020 – and please support us by forwarding this mail to all interested colleagues or project partners!

Best regards,  
AgriVoltaics2020 Organizing Team
